Margin of Error

The accuracy rate of a vultological analysis from 10–20 minutes of footage is not 100%. However, it increases in proportion to the amount of footage available. A report like this has an accuracy of ~90%, but we also include the types within the margin of error in the table below. To ensure your type has been correctly determined, please take [this psychological survey](#) and discuss the results of the survey and this report with your vultologist. Together, considering psychological and vultological information has more accuracy than either has by itself. You can also send an additional video to your vultologist, to help clarify the error margin further.

ALTERNATE TYPE		MESSAGE

Heads up! A note about other systems

For those familiar with other Jungian typology systems, such as Myers-Briggs, Keirsey or Socionics, it's important to note that Cognitive Type is not directly compatible with other models – nor do the functions or types carry the same definitions. For more information on Cognitive Typology's definitions, [visit this link](#).

This profile has been statistically derived from people who share your vultological elements. It describes 1 of 1024 possible psychological combinations anticipated by your body mannerisms.

NeFi III- Seelie Female / No Fallen Affect

As an **NeFi III-** you are an Explorer type with both your Compass and Articulator functions developed, making you *judgment heavy*. However, this profile has not yet been written. To read the standard profile, without your unique function developments, you can visit [this link](#). Thank you very much.
